NEW JANISOL STEEL WINDOW FROM SCHUECO JANSEN IS IDEAL FOR RENOVATION PROJECTS

New from leading steel specialist Schueco Jansen is Janisol Arte, a highly insulated steel window system designed specifically for the renovation market. By specifying Janisol Arte, an architect can satisfy the concerns of local authority planners and building conservation officers while still ensuring that the refurbished building meets the strict energy-saving requirements of Part L of the Building Regulations.

A Janisol Arte window has a narrow face-width of just 25 or 40 mm, giving it an appearance that is characteristic of the slender Bauhaus-type glazing to be found in many factories and industrial buildings. Therefore, in the majority of cases, the system will be acceptable as a replacement window even if a building has been given listed status.

Importantly, Janisol Arte combines structural elegance with impressive 'U' values of 1.6 W/m²K using standard Low 'E' double-glazed units. These values are the result of advanced technology which successfully combines high-grade steel with a unique thermal break material. In terms of energy efficiency, a Janisol steel window is currently the best in its class and a coveted 'A' WER is expected shortly.

The Janisol Arte window system is available in the conventional opening types commonly encountered in the majority of both pre- and post-war industrial buildings. These include side-hung and bottom-hung inward-opening vents and side and top-hung outward-opening vents. All opening vents are hung on butt hinges, while top-hung vents can optionally be fitted with friction hinges.

There is also a double vent version, and additional structural profiles can be added to the mullions to allow large-scale and rigid combinations of fixed and opening lights without the need to compromise on narrow face widths.

An example of the Janisol Arte window system will be on show at Schueco's Network Centre in Milton Keynes and will be featured in the company's 'Infomobile' which will be touring the UK in September with a range of Schueco Jansen steel window, door and façade samples.
