

**PRESS INFORMATION**

**JANUARY 2012**

## **IMPRESSIVE RANGE OF INNOVATIONS ON BOTH SCHUECO STANDS AT ECOBUILD**

Leading building envelope and solar products specialist, Schueco UK, the lead sponsor of Ecobuild 2012, has major stands (N2940 and S310) in both halls. Schueco is showing examples of its aluminium and steel systems as well as its latest solar energy products, some of which are new to the UK and all of which underline its status as a world-class company.

The solar products on display demonstrate the comprehensive nature of Schueco's solar offering: they include a roof-mounted display of thermal collectors and PV modules from the company's Premium and Compact Line systems; an array of Schueco TF<sup>+</sup> thin-film PV modules installed on Schueco's unique East/West flat-roof mounting system; current pump-stations and controllers together with a newly introduced controller and pump; roof anchors and under-construction; a range of inverters and a Sunalyzer Web PR data logger. There is also a working e-bike illustrating the diverse ways in which solar power may be used.

A number of the aluminium and steel systems being shown continue the solar energy theme with full-size examples of aluminium windows and sliding doors incorporating Schueco ProSol TF<sup>+</sup> thin-film PV technology, together with a ProSol-enabled brise soleil. A heavily insulated door and façade that meet PassivHaus standards emphasise Schueco's commitment to energy efficiency, while the Janisol Arte insulated steel replacement window from Schueco Jansen recently won a Gold Design Award at France's leading building exhibition, Batimat 2011. Also featured is an example of Schueco's new range of 'panoramic' motorised sliding doors.

For full details of all Schueco aluminium and steel systems for facades, windows and doors and its range of solar energy products, go to [mkinfobox@schueco.com](mailto:mkinfobox@schueco.com)

**Schueco – Green Technology for the Blue Planet**

That means clean energy from solar products and windows. And the contribution that Schueco makes to the environment with pioneering building envelopes. To be more precise, with Energy<sup>3</sup>: Saving Energy – Generating Energy – Networking Energy. Window and façade systems not only save energy due to optimum thermal insulation, they also generate energy thanks to efficient solar solutions. This creates an excess of energy which can be used by means of intelligent networking. For building functions, as well as for everyday life. The result is a significant step towards energy self-sufficiency. Towards the sustainable conservation of natural resources. And for a secure future. With more than 5200 employees and 12,000 partner companies, Schueco is active in more than 75 countries worldwide and achieved turnover of 2.38 billion euros in 2010.
